

autoclosets

Quotations

Autoclosets generates automatic quotes based on the price of panels and components. It also allows you to control costs, margins, and discounts. It has various reports that can be customized.

Manufacturing

Autoclosets generates a list of the cabinet components and the measurements of the panels, as well as edging information. Additionally, it links to cutting optimization programs to reduce board waste.

The fastest, simplest, and most powerful solution for point-of-sale and custom closet manufacturers.

Create your custom wardrobe.

Autoclosets incorporates a step-by-step wardrobe design module that simplifies the learning process and allows for precise, simple, and quick design.

- 1** | **TEMPLATE:** Select a predefined template with the door system, baseboard measurements, side type, board thickness, how to assemble the back, top, and base, etc.
- 2** | **DOORS AND MODULES:** Define the wardrobe's measurements, number of modules, number and model of doors, moldings, and finishes. Autoclosets alerts you about sliding door interferences with drawers in your designs.
- 3** | **ARCHITECTURE AND OBSTACLES:** Autoclosets allows you to adapt the wardrobe to the architecture based on walls, beams, or columns that affect its location.
- 4** | **STRUCTURE:** Modify and customise the shelves, dividers, and modules of your project.
- 5** | **DISTRIBUTION:** Autoclosets helps to place drawers, strips, bars, shelves, and accessories in seconds while automatically respecting manufacturing specifications.
- 6** | **PRESENTATION AND REPORTS:** Once the wardrobe is designed, high-quality photorealistic images, plans, material lists, and quotes can be generated.

PLANS, IMAGES, AND LISTS

Autoclosets quickly and easily creates photorealistic 3D images, with fully dimensioned floor plans and elevations according to desired measurements. Additionally, it automatically generates component lists and quotes.

CATALOGUE

Autoclosets includes a universal catalog with multiple accessory models, doors, and finishes. It also incorporates a template editor that allows for configuring the assembly and manufacture of different parts of the wardrobe in a simple and efficient way. This way, the designer only has to select the desired template and focus on the design.

3D VIEW

Instantly visualize 3D images and facilitate the selection of finishes and decision-making for the customer. You can send a link with images, 360° panoramas, and virtual tours using Microcad Software's cloud.
